Find m_2
Such that
the system
can accelerate
at 2.500 m/s^2 on
planet Earth

Total mass to accelerate
is $(500 \text{ kg} + m_2)$
Force needed for acceleration
is $F_{\text{acc}} = m a = (500 \text{ kg} + m_2)(2.5 \text{ m/s}^2)$
So $F_{\text{acc}} = 1250 \text{ N} + (2.5 m_2)(\text{m/s}^2)$

$$F_{\text{TOTAL}} = F_f + F_{\text{acc}}$$

$$F_f = \mu F_N = (.2)(500 \text{ kg} + m_2)g$$

$$\therefore 2000 \text{ N} = (.2)(500 \text{ kg} + m_2)(9.8 \text{ m/s}^2) + (500 \text{ kg} + m_2)(2.5 \text{ m/s}^2)$$

$$2000 \text{ N} = (1.96 \text{ m/s}^2)(500 \text{ kg} + m_2) + (500 \text{ kg} + m_2)(2.5 \text{ m/s}^2)$$

$$2000 \text{ N} = (500 \text{ kg} + m_2)(1.96 \text{ m/s}^2 + 2.5 \text{ m/s}^2)$$

$$2000 \text{ N} = (500 \text{ kg} + m_2)(4.46 \text{ m/s}^2)$$

$$500 \text{ kg} + m_2 = (2000 \text{ N}) / (4.46 \text{ m/s}^2)$$

$$500 \text{ kg} + m_2 = 448.4 \text{ kg}$$

$$m_2 = 448.4 \text{ kg} - 500 \text{ kg}$$

$$m_2 = -51.6 \text{ kg}$$

Note: 51.6 kg must be removed if this system is to work.

The negative mass tells us that mass must be removed.
